

ABSTRACT OF THE DISCLOSURE

Systems and methods for providing computer based printing, scanning and faxing. A computer device is used in a system configuration to describe a fax operation as a sequence of commands from a fax description language (FDL) forming a program unit, wherein the program unit may be constructed, transmitted and executed in a single operational step. The computer device is also used to configure, send and/or retrieve facsimile messages for fax jobs, wherein the fax job requests are sent through an existing print subsystem. Accordingly, a user may send a fax configuration or fax job send or retrieve request as a print job.
